

Cheeks Bar & Grill — Owner Presentation Pack (Pilot Proposal)

Prepared for: Ryan + Angela (Wausau, WI)

Prepared by: Cody

Decision Goal (today): Approve a paid pilot that turns QR scans into deposit-confirmed private events that fit BOH capacity, reduce stress, and are measurable.

1) Verified business facts (use in the pitch)

Address	58241 E Wausau Ave, Wausau, WI 54403
Phone	+17153934026
Email	cheeksbandg@gmail.com
Current canonical site (public)	cheeksbar.com
Menu pricing anchors (public)	Appetizers ~\$5.99–\$10.99, Burgers ~\$12.99, Kids ~\$5.99–\$6.99 (examples).

Source note for owner discussion: menu items and prices are visible on cheeksbar.com (e.g., curds \$9.99, wings 6/\$9.99, Cheeks Burger \$12.99).

2) Reality framing (what you say in the first 90 seconds)

- Ryan is already carrying BOH: ordering + prep + execution in a small kitchen with thin staffing.
- Angela is already carrying FOH/bar + staff management.
- Events are high upside because the bar space can host groups — but the risk is BOH chaos and last-minute unpredictability.
- The solution is not “more marketing.” The solution is a **booking system** that only accepts events that fit your rules.

3) What is already built (as of this ZIP build)

- Mobile-first landing page with primary CTAs: Request Event, Call Now, Directions, Menu, Events.
- Smart Directions: automatically opens Apple Maps on iPhone/iPad and Google Maps on most other devices.
- Event Request intake tool (inquiry.html): structured form → generates a clean summary → Copy button → Email draft button.
- Basic SEO hygiene files included: robots.txt + sitemap.xml (verify contents before go-live).
- Basic UI components: sections for hours, menu/photos, events, gallery, contact.

What is intentionally NOT ‘final’ yet (requires owner choices):

- Where inquiries should route (Angela’s preferred inbox / CRM) and what gets forwarded to Ryan (recommended: BOOKED only).
- Deposit policy + cancellation window (posted on page; enforced in process).
- Event package menu/caps/lead times (designed to protect BOH).
- Attribution naming rules for QR placements (so reporting is clean).

4) BOH-safe event system (the operating model)

- **BOOKED definition:** deposit paid + guest count window agreed + package selected.
- **Angela handles:** inquiry triage + quote + deposit request + confirmation message.
- **Ryan sees:** a single “Event Sheet” for BOOKED events only (no back-and-forth).
- **Kitchen protection:** caps + lead time + limited packages; no custom free-for-all menus.

5) Suggested event packages (examples aligned to current menu pricing)

Tier	Best for	BOH load	Example inclusions (public menu)	Cap / lead time (recommendation)
A — Apps + Drinks	Birthdays / casual groups	Low	Curds (\$9.99), wings, onion rings (\$5.99), jalapeño poppers (\$8.99)	Up to ~30; 7 days
B — Limited Buffet	Teams / graduation	Medium	2–3 items + sides; batch-friendly	Up to ~45; 7–10 days
C — Premium Plated	High spend / small VIP	High	Strict limited plated choices	Up to ~20–25; 10–14 days

Note: tiers, caps, and lead times are designed to keep Ryan’s kitchen predictable. We finalize these with Ryan based on prep reality.

6) Deposit policy — evidence-based patterns (use these as owner-friendly options)

- Many restaurants require a deposit to finalize a reservation, then apply it to the final bill.
- Common structures include: per-person deposit (e.g., \$25/head for groups >10) OR flat deposit (e.g., \$300) OR % of minimum spend (e.g., 50%).
- In every case: **reservation is not final until deposit is received.**

Deposit model	What it does	Operational fit for Cheeks
\$25 per person (groups >10)	Simple + fair; scales with party size	Great for Tier A/B
Flat \$300 deposit	Fast; discourages flakes; easy bookkeeping	Good for high-demand dates
50% of minimum spend	Strong protection; aligns to minimum guarantee	Best for premium/private room style events

Evidence examples: per-person deposit policy (\$25/head for groups >10), flat deposit (\$300), and 50% of minimum spend patterns are documented by published restaurant/event policies.

7) Compensation + pricing — grounded ranges + clean options

A) Local comp anchors (Event Coordinator-type work)

Wisconsin event coordinator wages appear around ~\$20/hr on job-posting aggregates, with higher ranges (~\$25–\$26.50/hr) for university roles. Use these as a sanity check for a part-time 'Events & Growth' role.

B) Digital build market anchors (landing page + forms)

Freelance landing page work commonly prices in the hundreds to low-thousands for small builds, and higher for custom conversion work. Your deliverable is a funnel + operational system, so price on value, not hours.

C) Owner-friendly options (A/B/C)

Option	Who it's best for	Pay structure	What you deliver / manage
A — Hybrid Managed (Recommended)	Owners who want it handled end-to-end	Setup \$1,500–\$2,500 + \$300–\$500/mo	Build + 150–\$200 per BOH event; tracking; monthly updates
B — Pay Per BOOKED Event	Owners skeptical of monthly fees	Setup \$500–\$1,500 + \$175–\$250 per BOOKED event	BOH system + tracking; you're paid when it produces conversions
C — Buyout	Owners who want full ownership	\$3,500–\$6,000 one-time (+ optional support)	Setup + asset transfer only after paid; optional maintenance

Recommendation: Offer Option A first (fast yes + ongoing accountability). If they resist monthly, pivot to Option B (performance).

D) Simple ROI sanity check (math that owners understand)

Events/month	Avg event revenue (illustrative)	Option A payout (midpoint)	Option B payout (midpoint)
1	\$1,200	Setup amortized + \$400/mo + \$175 ≈ \$575	\$0/mo + \$212
2	\$1,200	\$400/mo + \$350 ≈ \$750	\$0/mo + \$425
4	\$1,200	\$400/mo + \$700 ≈ \$1,100	\$0/mo + \$850

Interpretation: if even 1–2 events/month happen that otherwise wouldn't, the system can pay for itself while reducing BOH chaos.

8) Exact ask + anti-theft framing (scripts)

Text to Ryan

"I'm ready with a 30■minute demo for you and Angela: QR → event request → deposit-confirmed booking → Event Sheet for Ryan. At the end you pick Option A/B/C and a launch date."

Text to Angela

"I built a BOH-safe private events booking system for Cheeks that turns QR scans into deposit-confirmed events (with caps + lead times). 30 minutes to demo and choose Option A/B/C?"

Boundary sentence (use exactly)

"I'll demo everything. I don't hand over editable assets or admin access until the pilot terms are signed and the first payment clears — that prevents misconfigurations and protects the work."

Staged disclosure (what you show when)

- Pre-deal: live demo, screenshots, KPI plan, package concepts, and pricing options.
- Post-deal + initial payment: admin access, editable source code, tracking registry, and automation wiring.
- After pilot success: expansion features (deposit checkout links, CRM, SMS auto-replies, staff scheduling hooks).

9) Build verification (what exists in the current ZIP)

File checks:

- Missing required files: /thank-you.html
- Internal anchors detected: #contact, #events, #gallery, #hours, #main, #menu, /inquiry.html
- External links detected (sample): <https://cheeksbar.com/>, <https://maps.apple.com/?q=58241%20E%20Wausau%20Ave%2C%20Wausau%2C%20WI%2054403>, <https://www.facebook.com/p/Cheeks-Bar-and-Grill-61571389349445/>, <https://www.google.com/maps/search/?api=1&query=58241%20E%20Wausau%20Ave%2C%20Wausau%2C%20WI%2054403>, <https://www.yelp.com/biz/cheeks-bar-and-grill-wausau>, <mailto:cheeksbandg@gmail.com>...
- Event intake tool: inquiry.html includes summary generation + copy + mailto draft + phone CTA.
- Smart Directions: app.js rewrites links with data-apple/data-google at runtime based on device.

10) Next actions while waiting for owner response (do these now)

- Prepare a 2-minute screen-recorded demo (home → inquiry → summary → email draft).
- Pre-write the 3 package tiers as owner-friendly PDFs (1 page each).
- Draft the one-page pilot terms (plain English): price, access, ownership, non-circumvention.
- Have a printed QR sheet (3 placements) ready for them to approve: bar table tent, flyer, staff shirt/hat.
- During meeting: confirm Angela's routing inbox + deposit policy + caps. Then set launch date.
